Introduction overview

The Thermal Imager is handheld imaging camera used for predictive maintenance, equipment troubleshooting, and verification. Focus the len to the object, Then the thermal and visual images are displayed on the LCD and can be saved to a Micro SD Memory card. Transferring images to a PC is accomplished by removing the SD memory card and connecting it to a PC through the included card reader, or transfer the images and video stream to the smart device with “Thermoview” apps installed.

In addition to the features mentioned above, the Thermal Imager provide video recording and play back.

Features

3.5 in. LCD display , 640x480 pixels, Touch screen

Intelligent AI face recognition, automatically counting the number of people tested

Simultaneous temperature measurement of 10 people in 20 milliseconds, fast and efficient

High temperature automatic alarm prompt

Automatic marking of abnormal forehead temperature, snapshot real-time picture and data

Use imported sensors to quickly capture instantaneous scene temperature

Non-contact temperature measurement

Can display external large screen, HDMI HD output photos and videos
